Eriomin®

Clinically researched prediabetes formulation

The flavonoids in Eriomin® have been clinically tested in three published human clinical trials and shown to boost GLP-1 for reduced blood glucose levels, increased insulin production, support a healthy inflammatory response, and impact other health biomarkers that contribute to healthy blood glucose management.*

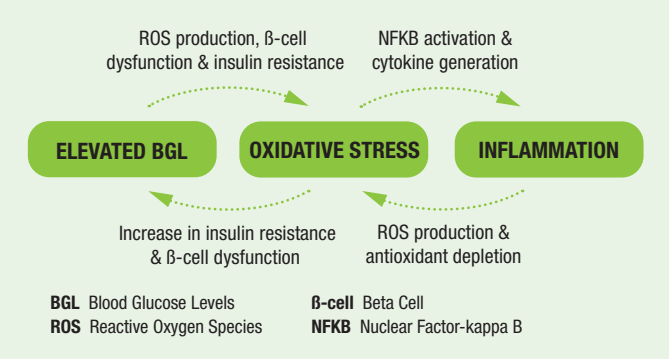
When life gave us lemons, we made lemon aid

Prediabetes: A global concern

According to the American Diabetes Association (ADA), it's anticipated that 6.5% of the global population will be prediabetic by 2045. Currently 1 in 3 adults in the United States are prediabetic. Prediabetes is not a single condition, rather it is a group of conditions that affect the metabolism of carbohydrates and result in high blood sugar levels. Effective management of prediabetes must address the cyclical interaction of blood glucose levels with insulin sensitivity, inflammation levels and oxidative stress.



Eriomin® provides triple functionality

Unlike other blood glucose management ingredients, Eriomin®, a patented lemon extract, takes a unique multi-functional, integrated approach to prediabetes management. Eriomin's triple-pronged functionality:

- Supports healthy blood glucose levels and increases insulin production by naturally boosting GLP-1*
- Maintains healthy inflammation response*
- Promotes strong antioxidant activity*

Proprietary blend of lemon flavonoids

Eriomin's proprietary blend is primarily composed of Eriocitrin. Eriocitrin has been clinically shown to support increased GLP-1 levels, reduce pro-inflammatory biomarkers, generate potent antioxidant activity and support production of short-chain fatty acids (SCFA).*

Backed by human clinical research

Eriomin's standardized blend has been studied in three gold standard, randomized, double-blind human clinical trials. Study results on over 150 participants indicate that Eriomin helped subjects maintain glycemic control within healthy parameters.

A natural GLP-1 booster

Glucagon-like peptide 1's (GLP-1) ability to promote insulin production and remove glucose from the bloodstream makes it the single most important hormone in helping manage healthy blood glucose levels. A multitude of scientific discoveries by Ingredients By Nature have shown that Eriomin can boost GLP-1 levels naturally and reduce hyperglycemia after only 12 weeks of intervention.*

What suggested structure function claims can Eriomin® products make?

The claims provided below are for informational purposes only and should be reviewed by your legal counsel and regulatory designee, as claims may vary per country.

- Helps maintain blood glucose levels within the normal range.*
- Helps support normal insulin sensitivity.*
- Helps naturally boost GLP-1 levels.*
- Helps manage a healthy inflammation response.*
- Supports healthy cell function through increased antioxidant activity.*
- Promotes the growth of beneficial bacteria associated with glycemic metabolism.*

Why choose Eriomin®?

- Clinically studied in three human clinical trials
- Addresses multiple, interdependent functions
- Utilizes proprietary extraction process
- Versatile powder for use in capsules, blends and tablets
- Suspendable in beverages with a neutral flavor profile for foods
- Patent protected
- Backed by Ingredients By Nature, a pioneer in natural ingredients since 1932
